

1 Assessment Criteria

- 18 (20 pts) Originality/Interest: Is the topic original, interesting, and substantial – or is it trite, pedantic, and trivial? How much creativity, initiative, and ambition did the group demonstrate? Is the basic question driving the project worth investigating, or is it obviously answerable without a data-based study?

you showed a lot of creativity in using Javier's data package and creating a prototype of a nutrition app. Nicely done!

- 17 (20 pts) Degree of Difficulty: How challenging was the project? Were the data particularly large, complex, and/or messy? Did the data come in an obscure format? Was a scraper or API necessary to acquire the data? Was a challenging visualization or applet constructed? Were any elements from outside the coursework necessary to complete the project?

much of what you worked on was relatively straightforward. However it was impressive to see rough edges in app (e.g. warnings abound)

- 18 (20 pts) Design: How well were the graphical elements of the project designed? Were they clunky or elegant? Was a truly original view of the data presented? Were any interactive elements usable?

I'm not sure that things weren't clunky but it's not clear that I could have done better. For a prototype for an early VC demo you hit the mark!

- 19 (10 pts) Meaning/Analysis: Did we learn anything meaningful from this project? Are the chosen analyses appropriate for the variables/relationships under investigation, and are the assumptions underlying these analyses met? Are the analyses carried out correctly? Did the group make appropriate conclusions from the analyses, and are these conclusions justified?

I liked your "recrest diet" component: This was a great way to augment your nutritional results

- 17 (20 pts) Write-Up: How effectively does the write-up communicate the goals, procedures, and results of the study? Are the claims adequately supported? Does the writing style enhance what the group is trying to communicate? How well is it edited? Are the statistical claims justified? Are text and analyses effectively interwoven? Clear writing, correct spelling, and good grammar are important.

report was a bit skimpy (and formatted to html) ← wrong folder but overall provided a solid overview of the process, your presentation

- 17 (20 pts) Oral Presentation: How effectively does the oral presentation communicate the goals, procedures, and results of the study? Do the slides help to illustrate the points being made by the speaker without distracting the audience? Do the presenters seem to be well-rehearsed? Did they properly budget their time? Do they appear to be confident in what they are saying? Are the arguments persuasive?

First hello some is right around the corner. cute but effective, clear + clean slides
 nice overview of data + data source. Excellent table of relationships.
 rounding of results perhaps a bit more time with the app?

1. ____ (3 pts) Volume: Are the speakers loud enough? Can you hear them even in the back of the room?
2. ____ (3 pts) Presence: Do the speakers command the room? Do they draw your attention or do they just look like they want this to be over as soon as possible?
3. ____ (3 pts) Emphasis: Do the speakers use intonation to signal what words or concepts are most important? Or do they appear to be reciting a speech flatly?
4. ____ (3 pts) Eye Contact: Are the speakers engaged with the audience? Do they seem connected or do they seem to be going through the motions?
5. ____ (3 pts) Clarity: Did the speakers convey a clear sense of what the project is about? If you had to tell someone what their project was about in three sentences could you do it?
6. 20 (3 pts) Mastery: Do the speakers appear to have full command of the material? Were there obvious gaps in their knowledge of the subject matter? Were they able to answer questions coherently? some students (e.g., interns) felt a little less confident

Repo Evaluation

1. 5 (5 pts) A README.md detailing all the steps to reproduce your results. I will use this file to reproduce your results.
2. 5 (5 pts) No references to local file structure. All references should be relative (not absolute) pathnames.
3. 5 (5 pts) Helpful comments in code.
4. 3 (5 pts) No scrap code or files left in the repo. No passwords or personal information.
5. 15 (15 pts) Able to replicate your code, app, and/or report.
6. Comments:

2 Nice! done!
