
Diet Analyzer

— Javier Gutierrez and George
Chaidemenos —

Introduction/Purpose

Purpose/Goal: Create a diet Analyzer using an interactive shiny app

Description: User will input what foods they had eaten in a day and the app will provide an analysis of their diet

How? Through pie charts, bar graphs, and comparisons to baseline diets

Target audience?

Why? Help people understand their diet and encourage them to reach their

Explain Data Set

The data set presents a compilation of the food available in the main Canadian market.

It consists of a relational database that connects foods to their corresponding food groups, sources, nutrient values, or even possible ways of measuring each food.

The main advantage of the package is how feasible it is to calculate nutrient values based on the amounts of foods you consumed.

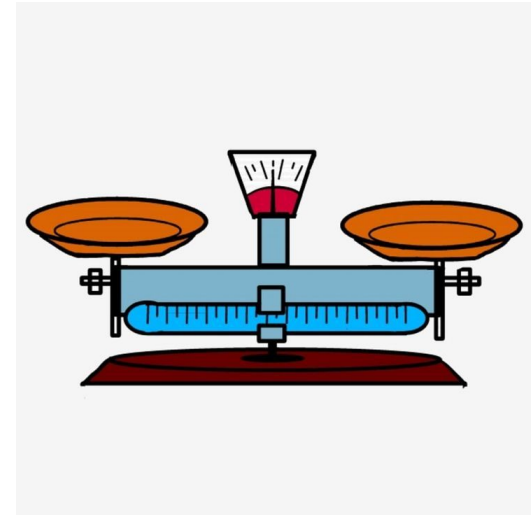

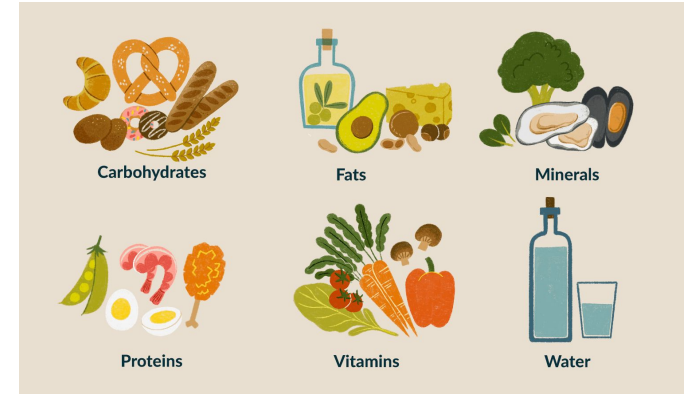

There are other miscellaneous data such as the amount of a product that consists of refuse (waste) or yield (useful parts).

The variation of foods is comprehensive to many possible diets, and information is included in french as well, allowing for bilingual support

Variables

- Food Type
- Nutrient Name
- Nutrient Unit (g, mg, ml etc.)
- Nutrient quantity: nutrient quantity in nutrient unit per 100 grams of food
- Measure Name: type of quantity used to measure the food
- Conversion Factor Value: the factor by which we multiply the nutrient quantity per the measure used
- Food Group (Dairy, Fruits, Beef products, Beverages etc.)

Present UI

Add a screenshot of the ui and describe it

Example Diet Pipeline

Pick a meal:

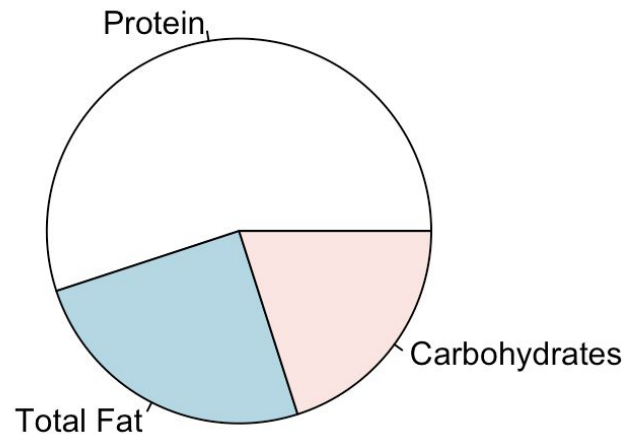

- Cheese souffle
- Beef pot roast, with browned potatoes, peas and corn
- Chicken, broiler, light meat, fried

Screenshot of table with selected items

Analyzing our Meal

nutrient_name <chr>	value <dbl>	proportions <dbl>
PROTEIN	58.10869	55.04830
FAT (TOTAL LIPIDS)	26.27067	24.88709
CARBOHYDRATE, TOTAL (BY DIFFERENCE)	21.18010	20.06462

Diet Nutrient Proportions

Baseline diet comparison

Have someone try is out

Now it's your turn

Diagram of joins

Draw a diagram explaining how everything works

Baseline Diets

Baseline Diet	Protein	Carbohydrates	Total Fats
Athlete	20%	30%	50%
Normal	15%	27.5%	57.5%
Vegan/Vegetarian	17.5%	27.5%	55%
Desert Lover	7.5%	32.5%	60%
Fast Food Lover	15%	37.5%	47.5%
Carnivore	30%	52.5%	17.5%

Best fit algorithm

Used least square method to compare the
